

Document 13: SaaS Cloud Storage Subscription Terms & Service Level Agreement

Cloud Infrastructure, Product Management & Legal

Version 4.0 — Updated October 2026

1 Scope and Service Overview

This agreement details the operational policies, subscription storage tiers, device synchronization protocols, data lifecycle management, and cancellation conditions for SaaS Cloud Backup and Sync services.

2 Subscription Tier Breakdown

Subscribers can choose between complementary promotional tiers integrated with hardware purchases or paid enterprise storage plans.

Plan Tier	Storage Quota	Pricing	Included Features
Basic Tier	100 GB	Free (1st Year)	Single device, 7-day versioning
Pro Tier	2 TB (2,000 GB)	\$9.99 / month	Multi-device sync, continuous history
Enterprise Tier	Unlimited / 10 TB Pool	\$29.99 / month	Dedicated API, SAML SSO, admin log

Table 1: Cloud Storage Tier Feature Comparison

2.1 Promotional Basic Tier Rules

- **Hardware Incentive:** Customers purchasing qualifying laptops or desktop computers receive a 1-year complimentary subscription to the 100GB Basic Tier.
- **Auto-Renewal Transition:** Upon completion of the 365-day promotional window, accounts automatically convert to the standard paid Basic plan (\$2.99/month) unless canceled prior to renewal.

3 Cancellation Terms & Grace Period Policies

Subscribers are free to modify or terminate their cloud subscription services at any time through their account dashboard.

3.1 Account Cancellation Effect

- **Active Billing Period Access:** Canceling a subscription halts future recurring billing charges immediately. The user maintains full read, write, and download access to their cloud files through the end of the current paid monthly or annual billing cycle.
- **No Partial Pro-Rated Refunds:** Monthly subscriptions do not offer partial month pro-rated refunds upon cancellation. Annual plans canceled within 14 days of purchase receive a full refund minus a \$5 setup processing fee.

3.2 Data Retention & Grace Period

- **30-Day Data Preservation Grace Period:** Following subscription expiration or cancellation, all stored files, database snapshots, and historical version backups enter a protected 30-day read-only grace period. Users can log in to export or retrieve their files.
- **Permanent Purge Protocol:** On the 31st calendar day post-cancellation, automated server maintenance scripts execute a permanent file purge. All stored data is unrecoverably deleted using DoD 5220.22-M sanitization standards.

4 Data Privacy, SLA Uptime, and Encryption

All user files stored within cloud storage are encrypted locally at the client level using AES-256 and transmitted via TLS 1.3 protocol. The platform guarantees a monthly server uptime SLA of 99.9%.
